

Planning

For Assignment 1, my objective is to create a professional website that showcases my identity as a software engineer to potential employers. The primary focus of the website will be on professionalism and presentability, with a touch of creative design. My goal is to swiftly convey my information and skills to employers while incorporating some creative subtleties to distinguish it from typical portfolio websites. The first page of my website will serve as an introduction to myself. On this page, I intend to provide information about myself and include details about my previous job experience, such as teaching young children coding at a summer camp. Additionally, this page will contain information about my education in computer science at Dalhousie University. The next page of my website will delve into my relationship with coding, featuring information about the projects I have completed. The third and final page of my website will include information about the relevant courses I have taken, along with additional content such as video and audio attachments required by the assignment. Overall, my aim is for my website to be professional, creative, and to have a strong HTML layout.
